

Company Profile

We are WT WINTech High-quality fasteners

„We manufacture and sell high-quality fasteners.“

WT WINTECH a.s.

We are a Czech company operating for over 25 years in the field of fasteners. Our philosophy has long been focused on high product quality and a wide range of services for domestic and international customers.

The company was founded in 1995 based on the partners' experience in trading electronic and industrial components from Southeast Asia. With dynamic development, the small company has grown into a medium-sized trading and manufacturing company, serving as a partner to many customers from various industries.

Product-wise, the company has evolved from a distributor to a specialist in fasteners for the most demanding customers in the automotive, electrical engineering, and mechanical engineering sectors. Established management processes, quality logistics and production infrastructure, developed according to the latest technological and environmental trends, create a certain perspective for the future development of the company.

To ensure thorough targeting and high-quality services for individual industrial and commercial sectors, we have established an optimal organizational structure of the company into separate divisions. Thanks to team specialization, we are able to be highly flexible without losing the necessary shared support.

STANDARD Division

Standardized Fasteners

The STANDARD Division specializes in the sale of fasteners and the development of comprehensive product ranges. Our wide range of products, excellent product quality, and provided services ensure reliable deliveries to all sectors of industry, specialized manufacturing, and trade.

We offer over 25 000 items of fasteners compliant with DIN, ISO, and ČSN standards across 15 product groups. Additionally, we fulfill customized orders based on customer drawings and specifications. We offer a comprehensive program for window and door manufacturers, wood screws, drywall screws, sheet metal screws, hex head screws, internal hexagon screws, nuts, washers, threaded rods, rivets, furniture fittings, anchoring elements, tools, bits, and other related products. Since 2018, we have been the exclusive distributor of construction screws from the Austrian brand Schmid Schrauben for the Czech Republic and Slovakia.

25 000 +
items
of fasteners

The STANDARD Division is supported by a team of experienced regional sales representatives covering the Czech Republic, Slovakia, and export territories. Specific requirements of large customers are handled by account manager. Our sales team includes a customer service department providing necessary administrative and technical support to our customers. Customers can place orders 24/7 through our modern e-shop. Our priority is prompt order processing, with standard deliveries to the Czech Republic and Slovakia within the next working day.

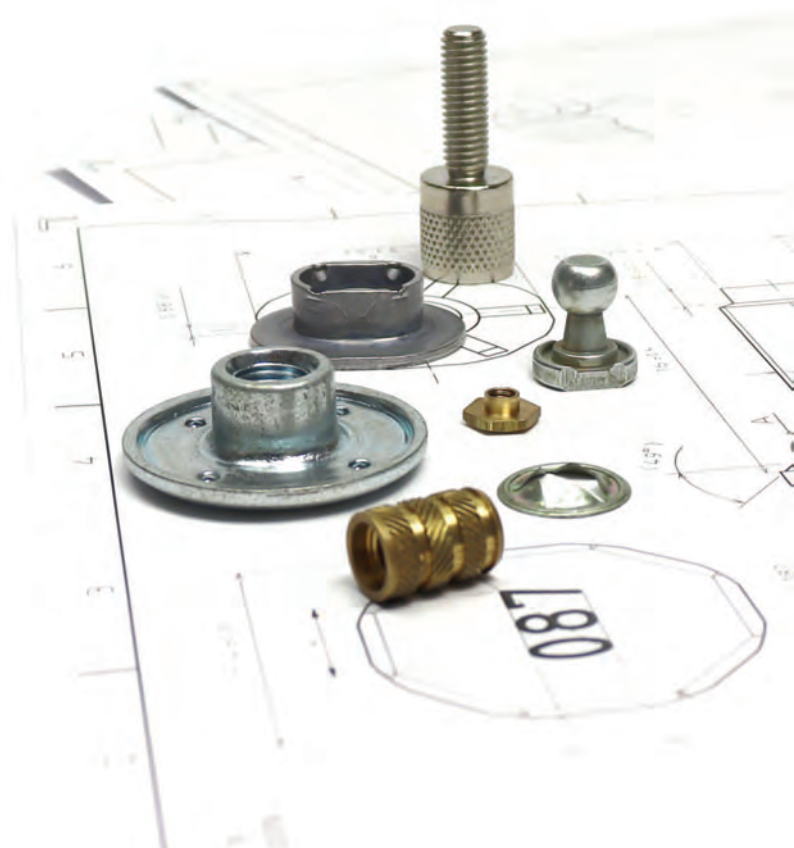

AUTEL Division

Automotive & Electronics

The AUTEL Division is composed of a team of specialists with 20 years of experience in the automotive, electrical engineering, and mechanical engineering industries. We provide comprehensive solutions for special drawing parts based on customer requirements. Our offerings include turned, milled, bent, punched, or pressed products with surface finishing. Drawing parts constitute 95% of the volume realized by the AUTEL Division.

Part production is carried out through engineering with contractually audited partners in Taiwan, certified according to ISO 9001 and IATF 16949 standards. We offer expert support from design concepts through development to production applications. Product quality is guaranteed through a three-phase quality control process. In terms of logistics services, we provide KANBAN systems, consignment stocks, customer packaging, FIFO system, and 24-hour deliveries.

20 years of experience

Our customers primarily include automotive industry subcontractors, manufacturers of electrical and electronic equipment, and machinery manufacturers.

ALU Division

Aluminium Constructions

The ALU Division is an independent manufacturing and trading part of the company specializing in standard and custom aluminium solutions.

Integral to the division is our technical department and production facility, enabling us to meet individual customer requirements efficiently.

90 km
of aluminium profiles
in stock

Systems for PV

We manufacture and supply components and comprehensive construction solutions for the implementation of photovoltaic power plants. We offer complete solutions for pitched and flat roofs, open areas, or facades, including the relevant documentation.

The KANYA System

We are the exclusive distributor of the Kanya AG aluminium assembly system for the Czech Republic, Slovakia, and Hungary. The extensive range of profiles, connectors, and accessories allows us to create solutions for customers across various industries.

Facade components

We have developed a construction system for ventilated facades. By combining components in a straightforward manner, we can create structures suitable for a wide range of applications in exterior and interior design, and green facades.

Custom Manufacturing

Our in-house manufacturing facilities enable us to provide our customers with individual solutions. We offer machining and processing of semi-finished products, including assembling specified arrays according to engineering drawings.

Logistics

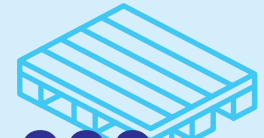

Daily shipping capacity of

25 tons

To meet the highest demands of our customers for stock availability, we continuously expand and increase our warehouse spaces. Most recently in 2020, we expanded our shipping warehouse to a total area of 4 000 m². This increased our capacity to over 6 000 pallet spaces.

Our logistics infrastructure includes automated packaging lines and an integrated robotic palletizing system. Consequently, our goods are delivered standardly packaged in distinctive blue boxes WT WINTECH. Additionally, we can offer customized packaging solutions to our customers. For efficient assembly of fasteners in construction, we conduct screw and bolt bundling using automated technology.

1.5 mil.
packages per year

We ensure deliveries to our customers using the KANBAN system. This means selected items are constantly available directly at the point of consumption. We manage these inventory controls based on agreed-upon terms, relieving our partners from the operational tasks associated with acquiring Category C items. This contributes to higher efficiency and lower costs for them.

Quality control

Our targeted strategy focuses on delivering high-quality products, backed by rigorous quality control principles. Quality control is a fundamental element for us, ensuring high levels of delivery performance even for the most demanding customers in industrial manufacturing and the automotive segment.

„Quality for Success“

Our measurement and testing portfolio includes a wide range of standard processes and specific tests tailored to customer requirements:

- Measurement of dimensions with a digital camera
- Measurement of dimensions with an automatic optical device
- Material tensile testing
- Verification of strength classes of bolts and nuts
- Measurement of metal hardness
- Measurement of surface finish thickness
- Corrosion tests in a salt spray chamber
- Torque measurement
- Self-tapping screw insertion tests
- Control of shape and positional tolerances

Product quality is guaranteed through a three-phase control process. In addition to the output control at the manufacturer, the second phase involves goods inspection before loading by our quality resident in Taiwan. The third phase is the entry control of goods in Přerov, performed by the Quality Control department before product packaging. We conduct these control processes according to clearly defined procedures in our well-equipped laboratory, which

ISO 9001

Our quality philosophy extends not only to product quality but also to our internal processes and services. Since 2003, we have implemented a quality management system that meets ISO 9001 criteria and is maintained to IATF standards.

we continually modernize with the latest measurement and testing technology and software for metal products.

Sustainability at WT WINTECH

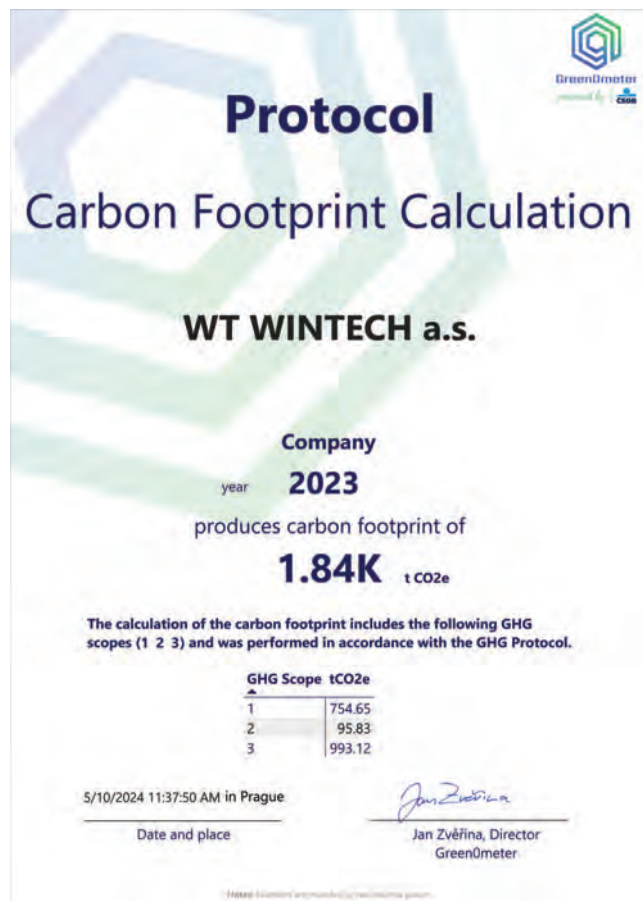

At WT WINTECH we care about the environment. As an environmentally conscious company, we recognize our responsibility towards the environment in which we operate.

Our company headquarters is located close to a city park and a national nature reserve. We highly value this exceptional location. The company premises are extensively landscaped with greenery, including park islands with water features, and we have revitalized watercourses flowing through the area. Rainwater from our buildings and surfaces is directed into several retention basins, which we then use for irrigating the site.

We strive to efficiently use valuable natural resources and energy. Through our own photovoltaic systems, we can produce nearly half of the electricity we consume. For heating the premises, we have reduced our dependence on non-renewable sources. In 2024, we launched an eco-friendly wood chip boiler with a neutral carbon footprint, helping us reduce natural gas consumption by 70%.

We produce
50%
of our own electricity

In our operational areas, we minimize waste production. We strictly recycle operational waste, energetically utilize wooden waste, and exclusively use packaging materials made from recycled materials. Our company actively participates in a system for sorting and recycling packaging waste operated by the authorized packaging company EKO-KOM, a.s.

We are committing to the European Commission's Green Deal initiative by auditing our carbon footprint. This involves minimizing both direct and indirect CO₂ emissions across our entire company, including within our supply chain. The analysis will help us transparently assess our environmental impact and set company-wide goals aimed at reducing our carbon footprint as part of our overall strategy.

E-shop

You can order fasteners and components for photovoltaic power plants from our e-shop. Our e-shop serves not only as an ordering tool but also as an online catalog where you can find the most up-to-date information about our products.

Availability 24/7

No operating hours need to be a barrier for you. You can place orders from anywhere and at any time that suits you.

Time Savings

Tools for Order Automation, Favorite Items, Watchlist, and more allow you to order goods quickly and efficiently on a regular basis.

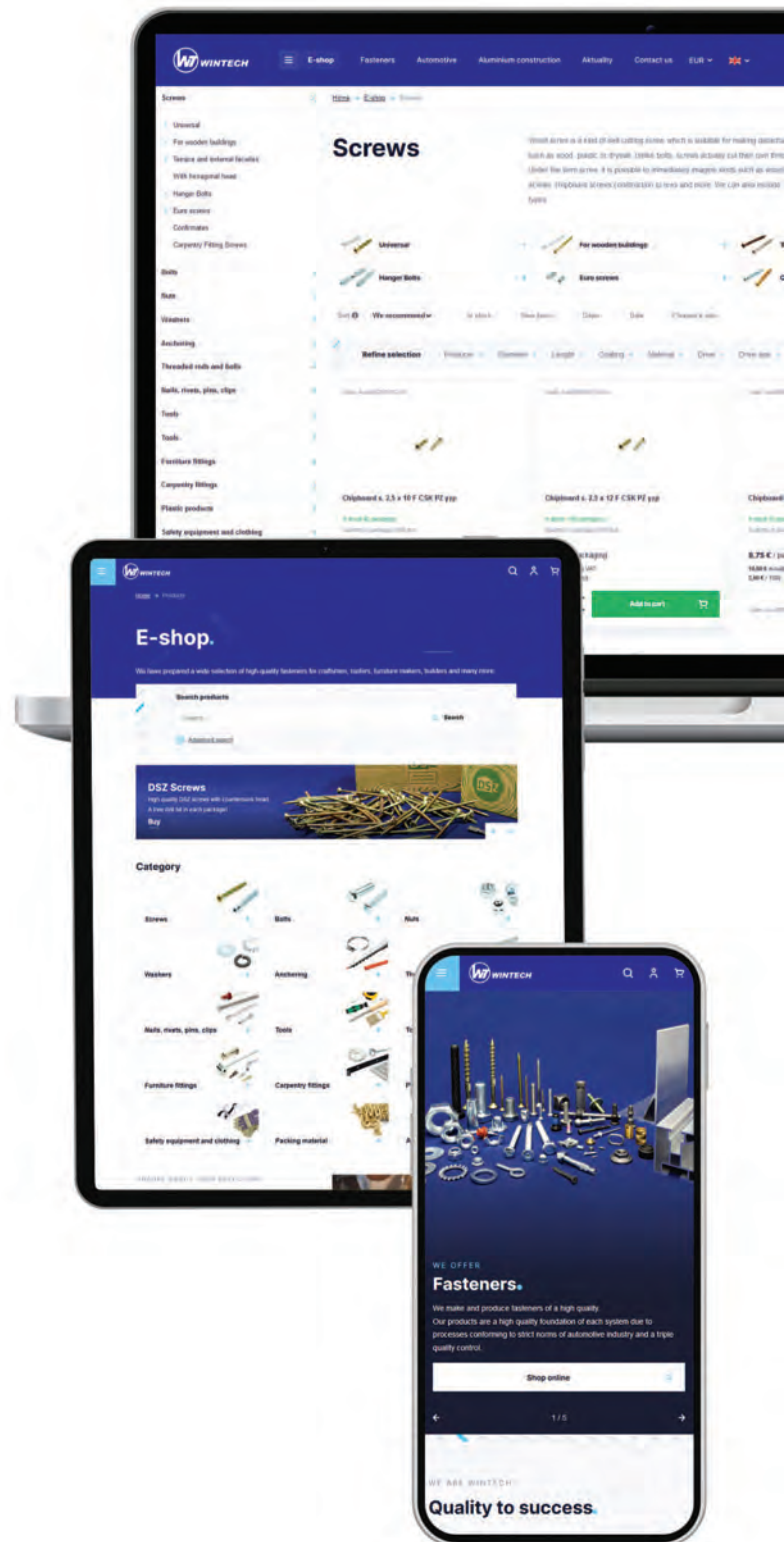

Custom Pricing

Registered customers can view their negotiated current prices on our e-shop. Simply register to gain access, it's really easy!

Detailed Infos

Our e-shop is the most flexible platform where we maintain up-to-date and detailed information about our products.
